## Abstracted Core Measures Reporting

ENCOR-a for Abstracted Core Measures is a comprehensive, state-of-the-art, quality reporting application, designed to support regulatory reporting of Core Measures performance to the Centers for Medicare and Medicaid Services (CMS) and The Joint Commission (TJC).

ENCOR-a streamlines hospital data management by automating much of the manual process of Case Selection, Case Abstraction and Data Submission.

Works seamlessly with Medisolv ENCOR for electronic quality reporting (eCQM).

For more information, or to schedule a demonstration, contact us at (844) MEDISOLV or visit us at [medisolv.com](http://medisolv.com).

### ENCOR-a BENEFITS

- **Faster case abstraction** with pre-populated demographic, coded abstracted data and advanced skip logic.
- **Dynamic measure status toolbar** helps visually identify measure status prior to the completion of a worksheet.
- **Easy access to clinical detail** reduces the amount of time spent on abstraction.
- **Context-sensitive help feature** is available on the worksheet.
- **Robust set of internal reports** monitor performance by physician, measure set or strata.
- **Simplified data submission** with Medisolv submitting files directly to both CMS and TJC.
- **Dynamic mobile dashboard with drill down capability** supports the hospital in monitoring performance from a summary level to a detailed account level.

Medisolv's comprehensive, hands-on implementation and support will enable your hospital to seamlessly transition to ENCOR-a.

### DATA FLEXIBILITY

ENCOR-a can accept periodic files from any Health Information System, enabling hospitals to upload cases to ENCOR-a on a daily basis. This provides results immediately after abstraction, allowing for performance analysis and corrective action prior to the end of the reporting period.

The ENCOR Quality Reporting Software Solution has earned the exclusive endorsement of the American Hospital Association.
